

Declaration on the Use of Generative AI

Jonatan Fuglsang Schwennesen (201805263), Nana Akrofi (202108953), Eske Junker (202104671) Master's Thesis, Computer Science.

We have used generative AI (Claude, Gemini, ChatGPT, and GitHub Copilot) in the work on this project, in the following ways:

- **Searching and structuring information:** as a dialogue partner to clarify concepts and discuss the structure and argumentation of the report. All sources were read, verified, and cited by us.
- **Programming:** code suggestions and debugging help during development of the prototype. All code was reviewed and tested by us.
- **Proofreading and feedback:** correcting grammar and improving the wording of text we had already written.
- **Finding sources:** help finding relevant sources for our report.

No confidential or personal data (GDPR) was uploaded to AI.
